## Admissions Policy of the Graduate School of Informatics

The field of study referred to as Informatics at the Graduate School of Informatics at Kyoto University consists of areas related to information in natural, artificial, social and life-related systems. It can be characterized by three pillars: the interface between humans/society and information, mathematical modeling, and information systems. The aim of the Graduate School of Informatics is not confined to the creation of new fields of study related to the three pillars. More broadly, we explore an understanding of the essence of ‘information’ and the immense impact of information technology on society, and we pursue advancement of information-related science and technology in the appropriate directions. According to the goal of Kyoto University, we will contribute, from the perspective of Informatics, to establishing harmonious coexistence within the global community.

We welcome a wide range of talented students who will understand the concepts of Informatics and will study science and technologies of Informatics with passion, and will aspire to develop this new academic area for the future. As long as they are proficient in their field of study or research, we hope to accept students from diverse backgrounds related to Informatics-unfettered by the conventional framework of sciences versus humanities-from Japan and from other countries. We also welcome working professionals who have a passion for studying Informatics.

Specifically, we welcome students having outstanding skills in diverse backgrounds, strong desire to study, strong interest in particular fields that comprise Informatics, and having excellent communication skills. We also hope to attract post-graduate fellows who have cutting-edge knowledge of Informatics and conduct research on science and technologies of Informatics, to advance to our Doctoral program.

The Master's Program in the Graduate School of Informatics (hereinafter referred to as "the School") constitutes the first two years of the Doctoral Program, as indicated in paragraph 4, article 4 of the Standards for the Establishment of Graduate Schools. The International Programs are established in the Intelligence Science and Technology Course; Social Informatics Course; and Communications and Computer Engineering Course of the School, which provide both lectures and research courses in English sufficient for completing the Master's Program.

**All times stated in the guidelines are in Japan Standard Time.**

**The Japanese version of the guidelines shall be the authoritative version, with the English translation provided only as a reference.**

Applicants who have already been accepted in the selection for the 2023 Master's Program in the School are not eligible to apply for admission via this process.
